

**Course Information Sheet**

<b>Higher education institution:</b> Slovak Medical University in Bratislava	
<b>Faculty:</b> Faculty of Medicine	
<b>Course code:</b> VL 026A	<b>Course title:</b> Internal Medicine (1)
<b>Type, extent and method of educational activities:</b>	
<i>Per semester in hours: 98</i> <i>Lecture: 42 / week 3 hrs.</i> <i>Exercise: 56 / week 4 hours</i> <i>(Student's total workload is 150 hours)</i> <i>Method of educational activity: full-time (distance)</i> <i>Form of study: daily attendance</i>	
<b>Number of credits:</b> 6 credits	
<b>Recommended semester / trimester of study:</b> 6th semester	
<b>Degree:</b> 1st + 2nd level (MUDr.)	
<b>Prerequisites:</b> VL 020 Propaedeutics of internal medicine	
<b>Conditions for passing the course:</b> The criterion for successful completion of the course is 100% active participation in clinical exercises, 80% participation in lectures, successful completion of the test, minimum success rate: 70%. The student's workload is 27 hours, which includes independent theoretical preparation for internships, improving the practical skills of the patient's physical examination. Preparing for testing.	
<b>Learning outcomes:</b> The student will acquire theoretical knowledge about the most common internistic diseases (cardiovascular, pulmonary, gastroenterological, hepatobiliary, nephrological, endocrinological, etc.), on the basis of which he will be able to distinguish individual diseases. At the same time he/she will get acquainted with their diagnostics, will be able to interpret the results of additional examinations, on the basis of received professional information. The student will also learn practical skills in the physical and additional examination of various internistic patients, taking into account the dominant pathology (cardiology, gastroenterology, nephrology, hepatology, endocrinology patients, etc.).	
<b>Course contents:</b> Examination of a cardiological patient (practice of practical skills, examination techniques). Basic cardiovascular diseases (ACS, cardiomyopathy, arrhythmias, arterial hypertension, coronary heart disease, myocarditis, endocarditis, pericarditis, valve defects, syncope, etc.), their diagnostics. Emergencies in cardiology, their diagnosis. Examination of a patient with a disease of the respiratory system (practice of practical skills, examination techniques). Basic diseases of the respiratory tract (bronchitis, pneumonia, lung abscess, bronchial asthma, tuberculosis, chronic obstructive pulmonary disease, cor pulmonale, lung tumors), their diagnosis. Emergencies in pneumology. Examination of patients with diseases of the GIT and hepatobiliary system (training in practical skills, abdominal and intra-abdominal organ examination techniques). Basic diseases of the GIT (GERD, esophageal achalasia, gastritis, peptic ulcer, pancreatitis, ulcerative colitis, GIT tumors) and hepatobiliary system (cholecystitis, cholelithiasis, hepatitis, liver cirrhosis, liver tumors and biliary system). Examination of a nephrological patient (practice of practical skills, examination techniques). Basic nephrological diseases (glomerulonephritis, pyelonephritis, AKI, CKD, kidney tumors), their diagnosis. Emergencies in nephrology. Examination of an endocrinological patient (hypo- and hyper thyroid function, diabetes mellitus, Addison's disease, Cushing's disease, etc.), practice of practical skills, examination techniques). Basic endocrine diseases, their diagnosis. Emergencies in endocrinology. Auxiliary examination methods in endocrinology. Examination of a hematological patient. Basic hematological diseases (anemia, leucosis, etc.), their diagnosis. Emergencies in hematology. Auxiliary examination methods in hematology. Examination of joints, muscles and spine. Basic rheumatic diseases (rheumatoid arthritis, deforming osteoarthritis, etc.), their diagnosis. Emergencies in rheumatology. Auxiliary examination methods in rheumatology.

<b>Higher education institution:</b> Slovak Medical University in Bratislava	
<b>Faculty:</b> Faculty of Medicine	
<b>Course code:</b> VL 026C	<b>Course title:</b> Internal Medicine (3)
<b>Type, scope and method of educational activities:</b>	
Per semester in hours: 77 Lecture: 35 / week 2.5 hours Exercise: 42 / week 3 hrs. (Student's total workload is 100 hours) Method of educational activity: full-time (external <sup>1</sup> ) Form of study: daily attendance	
<b>Number of credits:</b> 4 credits	
<b>Recommended semester / trimester of study:</b> 8th semester	
<b>Degree:</b> 1st + 2nd level (MUDr.)	
<b>Prerequisites:</b> VL 026B Internal Medicine (2)	
<b>Conditions for passing the course:</b> The criterion for successful completion of the course is 100% active participation in clinical exercises, 80% participation in lectures, successful completion of the test, minimum success rate: 70%. The student's workload is 23 hours, includes independent theoretical preparation for internships, training in algorithms for diagnosis and treatment of the most common diseases in internal medicine, examination of thematic patients, followed by analysis of diagnosis and treatment, self-study - preparation for the test.	
<b>Learning outcomes:</b> The student will acquire theoretical knowledge about the most common nephrologic, pneumological diseases on the basis of which he will be able to recognize individual diseases. The student will also learn practical skills in the physical and additional examination of various internistic patients, taking into account the dominant pathology (nephrological, pneumological patient). At the same time, the student will get acquainted with their diagnosis, will be able to interpret the results of additional examinations for individual diseases, generate a suitable treatment plan for specific diseases. In addition, the student will gain theoretical knowledge of the basics of sports medicine, will be able to apply the acquired knowledge in practice.	
<b>Course contents:</b> <b>Nephrology:</b> 14/14. Kidney physiology and pathophysiology. Inflammatory diseases of the kidneys and urinary tract. Tubulointerstitial nephritis. Acute kidney damage. Chronic kidney disease. Diabetic nephropathy. Extracorporeal elimination therapy. Kidney transplantation. Acid-base balance. Disorders of water and electrolyte metabolism. Additional examinations in the diagnosis of nephrological diseases, interpretation of results, treatment planning. <b>Sports medicine:</b> 7/14. The concept of sports medicine and the Sports Act. Sudden death in sports. Doping control in sport. Response and adaptation of organ systems to physical activity, functional diagnostics, anaerobic and aerobic testing. Preventive examination, anthropometric examination, sports traumatology. <b>Pneumology:</b> 14/14. Pulmonary and extrapulmonary tuberculosis. Tumors of the lungs, pleura and mediastinum. Cystic fibrosis, sleep-disordered breathing and rare diseases of the respiratory system. Obstructive and restrictive respiratory diseases.

<b>Faculty:</b> Faculty of Medicine	
<b>Course code:</b> VL 026E	<b>Course title:</b> Internal Medicine (5)
<b>Type, scope and method of educational activities:</b> Per semester in hours: 112 Lecture: 56 / week 4 hours Exercise: 56 / week 4 hours (Student's total workload is 125 hours) Method of educational activity: full-time (external <sup>1</sup> ) Form of study: daily attendance	
<b>Number of credits:</b> 5 credits	
<b>Recommended semester / trimester of study:</b> 10th semester	
<b>Degree:</b> 1st + 2nd level (MUDr.)	
<b>Prerequisites:</b> VL 026D Internal Medicine (4)	
<b>Conditions for passing the course:</b> The criterion for successful completion of the course is 100% active participation in clinical exercises, 80% participation in lectures, written test, minimum success rate: 70%. The student load is 13 hours. which includes independent theoretical preparation for internships, improving the practical skills of the patient's physical examination. Preparation for the written test.	
<b>Learning outcomes:</b> The student will acquire theoretical knowledge about the most common hematological, cardiological and rheumatological diseases on the basis of which he/she will be able to recognize individual diseases. He/she will gain an overview of rheumatic diseases and differential diagnosis. He/she will get a picture of the problem of patients in the elderly and will be able to recognize the most common symptoms of diseases in geriatric patients. The student will also learn practical skills in physical and additional examination of various internistic patients, taking into account the predominant pathology (hematology, cardiology, geriatric and rheumatology). In addition, the student will gain theoretical knowledge about the basics of geriatrics, the peculiarities of the course of diseases in the elderly, will be able to apply the acquired knowledge in practice.	
<b>Course contents:</b> <b>Rheumatology:</b> 7/7. Basic rheumatological diseases, their diagnosis. Examination of a rheumatological patient. Additional examinations for rheumatic diseases, interpretation of results, treatment planning. Biological treatment. <b>Haematology:</b> 14/7. Basic hematological diseases (leukocyte, platelet disorders, anemia, MPN, lymphoproliferative neoplasias, multiple myeloma, hemostasis disorders and thrombophilic conditions, acute leukemias, myelodysplastic syndrome), their diagnosis. Examination of a hematological patient. Additional examinations in hematological diseases, interpretation of results, treatment planning. Transfusion of blood and blood products. <b>Geriatrics:</b> 14/14. Introduction to geriatrics. Aging and old age. Altered image of diseases in old age, vulnerability. Pharmacotherapy in old age. Immobility, pressure ulcers, stool and urine incontinence. Older nutrition, sarcopenia, osteopenia. Mental disorders in old age. Disorders of electrolyte metabolism in old age. The most common infections in the elderly. Swallowing disorders. Instability and crashes. Fragile patient .. <b>Cardiology:</b> 14/21. Valve errors. Arterial hypertension. Aortic diseases, cardiomyopathy. Inflammatory heart diseases including infectious endocarditis and COVID infection 19. Atherosclerosis, Chronic ischemic heart disease. Acute coronary syndromes. Arrhythmia. SCD and resuscitation. Device therapy. Heart failure. Pulmonary circulation diseases.

Course information sheet

<b>Higher education institution:</b> Slovak Medical University in Bratislava	
<b>Faculty:</b> Faculty of Medicine	
<b>Course code:</b> GMSSE5	<b>Course title:</b> Internal medicine - state exam
<b>Type, scope and method of educational activities:</b>	
Form of teaching: defending the state exam	
Recommended range of teaching:	
Study method: Daily attendance	
<i>Studet workload: 100 hrs.</i>	
<b>Number of credits:</b> 4 credits	
<b>Recommended semester / trimester of study:</b> 11., 12. semester	
<b>Degree:</b> 1st + 2nd level (MUDr.)	
<b>Prerequisites:</b> Internal Medicine (1,2,3,4,5)	
<b>Conditions for passing the course:</b>	
100% participation in pre-state practice during which there is a continuous oral examination, successful writing of a medical record (practical part of the state exam), subsequent state exam before the examination commission (theoretical part of the state exam).	
Overall rating A, B, C, D, E, Fx. Minimum success rate: E	
The student's workload is 75 hours.	
<b>Learning outcomes:</b> the student will acquire theoretical knowledge and practical skills to the extent necessary for a graduate of the study field of general medicine, with the help of which he/she will be able to carry out a full initial examination of the patient (take anamnesis, perform a physical examination). In addition, he/she will be able to plan and subsequently interpret the results of laboratory and instrumental examinations for differential diagnosis of the patient's condition, will be able to summarize the information received, critically evaluate it and conclude it as a preliminary diagnosis, based on which he/she will recommend adequate treatment of the patient. The student will also be able to recognize, critically evaluate and subsequently address emergencies and urgent situations in internal medicine.	
<b>Course contents:</b> The pre-graduate internship lasts 10 weeks, during which the student performs full-time practical work at the patient's bedside in various internal medicine departments (in the inpatient department of the 1st Internal Medicine Clinic, Intensive Care Unit, Geriatrics Department, Department of Gastroenterology, Department of Pneumology and Phthisiology, at the Department of Hematology and Transfusiology, at individual departments of the NÚSCH under the guidance of responsible pedagogical staff, specifically participates in visits and clinical seminars at internal medicine departments, consolidates the acquired theoretical knowledge from internal medicine, implements practical skills in patient management, prepares for the final state exam . The state examination consists of a practical part (complete examination of the patient and processing of medical records, which includes anamnesis, objective examination, differential diagnosis, examination design, preliminary diagnosis, treatment proposal, epilation) and a theoretical part, which is performed before the state final examination commission. The student draws three theoretical questions from the designated areas. After answering all the questions and taking into account the result of the practical test, the commission will recommend the overall evaluation to the chairman of the commission.
